Summary

UPDATED version to be found on: <https://www.thingiverse.com/thing:3462260>

This is an mount for the e3d v6 hotend or clones. This mount is designed in such a way that it is possible to print in one go.

The mount should be 'the' all in one solution with minimal fastners for this popular printer and hotend style. The hotend should just 'snapon'!

The mount has been designed for an x axis distance of 45mm. If any other sizes are desired be sure to let me know in the comments.

This design is still a work in progress. We are working hard on a new and improved version with support for an end stop, cable management, and belt connecting capabilities. Be sure to check back in 2-3 weeks! Pictures of assembled mount will also be published!
